Vulnerability Management

Detect. Prioritize. Remediate.

Rooted in 20 years of experience and with hundreds of customers, Cygilant SOCVue Vulnerability Management quickly detects vulnerabilities from software flaws or misconfigurations. Cygilant provides or manages your scanning technology, prioritizes vulnerabilities and helps with remediation. Scale your IT security team with Cygilant to get the bandwidth and resources needed to regularly scan and analyze vulnerabilities.

Cygilant's simple integrated service

Whether augmenting a security program or starting from scratch, Cygilant hunts, detects and quickly responds to threats by leveraging its dedicated Cybersecurity Advisors, 24x7 Security Operations (SOC) team and our SOCVue Platform.

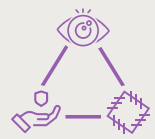

Cybersecurity Advisors

Dedicated experts work one-on-one with you as an extension of your team to identify and meet your security goals.

24x7 SOC Team

We operate global Security Operation Centers (SOCs) with four tiers of humans from level 1s to 4s working around the clock.

SOCVue Platform

SOCVue simplifies and consolidates multiple streams of security data to help detect and respond to threats faster and effortlessly collaborate.

Benefits

- **Improved security posture** – Comprehensive, up-to-the-minute threat intelligence, visibility into security events, real-time incident notification and guidance to quickly address security issues.
- **Dedicated cybersecurity experts** – Let our security experts become an extension of your IT team working for you and doing time-consuming incident investigation and analysis. You get time back to focus on other priorities. And we monitor your systems outside of business hours for round the clock coverage.
- **Save money** – Cygilant's affordable Cybersecurity-as-a-Service reduces capital investments in costly dedicated security technology.
- **Integration** - Combine with Cygilant Patch Management to correlate vulnerabilities with one step remediation.

What You Get with Cygilant

The Cygilant SOCVue Vulnerability Management subscription includes:

An extended cybersecurity team

- **Dedicated Cygilant Cybersecurity Advisor and Cygilant Security Operations Center (SOC)** – an extension of your own security. Combine with Cygilant Security Monitoring for continuous 24x7 monitoring of your security environment.
- **Cygilant SOCVue platform** – manage your vulnerability remediation process with integrated dashboards, ticketing, and reporting through Cygilant's security operations platform.

Managed detection & response

- **Vulnerability detection** – Cygilant SOCVue Vulnerability Management implements security best practices for detecting and remediating system vulnerabilities as recommended by SANS and other industry experts.
- **Vulnerability scanning** – Cygilant partners with the leading vulnerability scanning technologies to ensure that scans are comprehensive, and that the vulnerability database is up-to-date with the latest security threats.
- **Targeted scans** – New or modified systems are scanned for vulnerabilities
- **Managed solution** – Unlike traditional vulnerability assessment tools, Cygilant installs, configures and manages your scanning technology.

Compliance & reporting

- **Regular reporting** – The Cygilant SOC team delivers detailed vulnerability risk information to meet your security and compliance requirements, along with guidance for prioritizing and addressing vulnerabilities. You'll receive monthly security scorecard reports, scheduled event reports on a daily or weekly basis, automated compliance reports for common regulatory frameworks and custom reports as needed.
- **Monthly analysis** – The Cygilant SOC team also provides trend analysis to understand how security risk changes over time.
- **Compliance** – Experts in cybersecurity and compliance regulations, Cygilant helps you meet compliance requirements for vulnerability management with the right reporting.

Cygilant SOCVue Vulnerability Management integrates with Cygilant Security Monitoring, Enpoint and Cygilant Patch Management. You can meet multiple security and compliance controls in a single platform.
